
(a) Fixed rings tie sample size to building size
Adaptive ring (as run)
ρ = 0.00
Fixed 9.6 m ring
ρ = 0.93
floor, 25 cells
Ring cells sampled
Building footprint area (m²)
(b) Widening a ring does not move the tested count
Cells actually sampled
Cells the growth loop counts
floor, 25 cells
Median cells per ring
Ring width (m)
(c) So half the rings run to the cap
As run
Same rule, true counts
48%
98%
14%
10%
28%
2%
Buildings (%)
Ring width the rule settled on (m)
